**My Mission** Hello, I'm Joshua Bergman. I like cows. I've completed two freelance web dev projects - such as making a company site for a local frame shop where I increased the conversion rate of new customers by 50%. As a developer creating solutions that I can feel the value of is what drives me. That's why I created [Too Simple Analytics](#), an analytics app for developers with a whopping 14 users. I'm looking to bring my skills as a developer to a web development role, where I have experience working in FullStack, Frontend, and Backend. See my [portfolio](#) for examples of my work.

### Projects

#### Too Simple Analytics ([Source Code](#))

<https://toosimpleanalytics.com>

Too Simple Analytics started out as a personal script for tracking views of my projects. After a while of using this program I started to desire additional features. Too Simple Analytics provides that meaningful feature set including: advanced view tracking, powerful data filtering tools, dynamic data visualization, smart view counting scripts, and more. See for yourself using the guest credentials: email: "guest@email.com" password: "guest", on [TooSimpleAnalytics.com](#).

#### Portfolio ([Source Code](#))

<https://joshuabergman.dev>

My portfolio is a showcase of my journey as a developer. Features a custom GitHub display component, my repositories, key projects, easter eggs!?, and about me. This project reflects my passion for programming, designing systems, and my commitment to continuously learning and improving.

#### Algo Example ([Source Code](#))

<https://algoexample.com>

Algo Example is a collaboratively built educational platform dedicated to the exploration of data structures and algorithms. Offering interactive algorithm visualization, engaging user interactions, and interactive games, Algo Example represents a passionate collaborative effort.

#### Auto CL ([Source Code](#))

<https://autocl-abb1d.web.app>

Auto CL stands for "Auto Cover-Letter". It is a lightweight AI web app that bridges the gap between templated cover letters and time-consuming original cover letters. The application allows you to generate a unique structure for every cover letter. While not a replacement to writing a strong cover letter, Auto CL gives you a (usually) strong foundation to work off of.

### Skills

Javascript,  
Typescript,  
React, HTML,  
Node.js, CSS,  
Express.js, Git,  
MongoDB, Jest,  
Docker, Postman,  
Rest API, Python,  
Frontend, AGILE,  
Backend, SCRUM,  
FullStack, Redux,  
Database,  
Automation,  
React Hooks,  
Windows, Linux,  
Collaboration,  
Communication

### Work Experience

#### Freelance Web Development

Eagan, MN

- Completed two major freelance projects see on my portfolio: [joshuabergman.dev](https://joshuabergman.dev)

#### Closing Expert, Target

Eagan, MN Sep 2019 - Current

- Routinely received top performer awards & other awards in recognition of hard work and excellence in customer service.
- Led small teams to timely & efficiently carry out store projects.

### Education

Metropolitan State University  
Computer Science(35 Credits)

#### Certifications

MongoDB Node Developer  
Certified PC Pro
